The Hon. John D. Rockefeller IV
Chairman
Committee on Commerce, Science and
Transportation
United States Senate
Washington, DC 20510

The Hon. John Thune
Ranking Member
Committee on Commerce, Science and
Transportation
United States Senate
Washington, DC 20510

Dear Chairman Rockefeller and Ranking Member Thune:

The undersigned organizations include U.S. and international vessel owners and operators; fishing vessel, passenger vessel, and charterboat operators; labor unions; industries that rely on marine vessels to transport essential cargoes in domestic and international commerce; marine terminals; port authorities; and insurers. We are writing to request that S. 2094, the Vessel Incidental Discharge Act, be placed on the schedule for consideration and favorably reported by the Commerce Committee at its June 24 markup.

S. 2094, which will establish nationally uniform and environmentally sound standards for ballast water and other vessel discharges, enjoys broad and deep bipartisan support from Senators from all regions of the country. Its 31 cosponsors include 13 members of the Committee on Commerce, Science and Transportation, a majority of the committee.

As we wrote to you in March, S. 2094 is urgently needed. Today, two federal agencies, the U.S. Coast Guard and the Environmental Protection Agency, regulate ballast water and other vessel discharges under two differing statutory authorities. And, because neither federal statute preempts state action, more than two dozen states have established their own requirements for many of those same discharges – over 150 in all. This overlapping patchwork of federal and state regulations makes compliance complicated, confusing and costly for vessel owners and mariners. It is counterproductive to the goal of enhanced environmental protection, as companies have delayed investment in costly treatment technologies because they lack certainty that such systems will be acceptable wherever a vessel calls. It creates inefficiencies and uncertainty that add costs for shippers that rely on marine transportation to move essential cargoes. And, it has forced resource-constrained federal and state agencies to duplicate efforts and expend significant time and taxpayer money in a well-intentioned but unsuccessful attempt to harmonize their requirements.

S. 2094 would rectify this untenable situation by establishing a uniform, science-based federal framework for the regulation of ballast water and other vessel discharges that is good for the maritime transportation industry and the industries that rely upon it, good for the marine environment, and good for the American taxpayer. We thank you for your co-sponsorship of this legislation and we respectfully request that you bring S. 2094 before the Committee for markup next week.
